DURABLE / VERSATILE / EASY TO USE

Pevco offers delivery stations for every need within a hospital. All station options are compatible with both 4" and 6" tube systems and made from tough, powder-coated steel and industrial-grade electronics.

Standard and Compact Stations mount flush with a wall, saving valuable floor space. Versatile Compact Stations have additional installation options, including counter mount.

Pevco stations are engineered to send and receive carriers as quickly and safely as possible, so staff can focus on patient care. Designed to absorb noise, station padding lines the floors and walls for quiet carrier arrival. Carriers are easy to retrieve since they land at an ergonomic height and in an organized fashion. Sloped station bins position carriers in the order they arrive.

Equipped with Pevco Link™ user controls and an optional barcode reader, Pevco stations have powerful tracking capabilities that help reduce error.

The busiest areas of a hospital benefit from side-by-side stations that serve as a transaction hub. Stations pictured are wall-recessed; a freestanding option is also available.

Installed on an existing counter when floor space is at a premium.
