

DELIVERY MANAGEMENT SOFTWARE

Pevco Atlas[™] manages the delivery of patient-critical items through a hospital's pneumatic tube system – maintaining chain of custody, reducing errors and shortening turnaround times.

For Clinicians

Monitors and documents deliveries in real-time to support the transport of high-value items

- · Customizable dashboard can be filtered by department or stations, so clinicians only see delivery data relevant to them
- · Alerts staff to important events when integrated with leading nurse call systems
- Streamlines data access when integrated with leading EMR systems
- Links clinicians to the items they send and receive when integrated with Tyco C-Cure[™] and Lenel OnGuard[™] employee access management systems

For Facility Managers

Provides a user-friendly interface that makes monitoring transactions, setting priorities and controlling devices easy

- Supports three levels of user access: Administrator, Maintenance and Clinical
- Enables technicians to access its dashboard from any networked computer with a web browser
- Integrates with BMS (building management systems) to provide consolidated management of building systems
- Improves planned maintenance scheduling by documenting device cycle counts

For IT Managers

Runs as a service on virtual machines and servers to comply with network management requirements

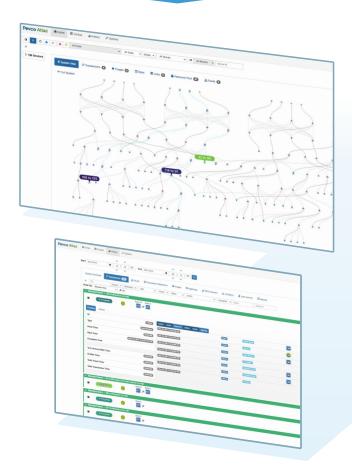

- Integrates with Microsoft Active Directory[™] for user authentication
- Supports HL7 protocols and web service communications to share data with other hospital systems
- · Stores data on industry standard SQL Server database clusters
- Uses standard TCP/IP protocols to communicate over a hospital's Ethernet network

Pevco

User-Friendly

Built for Healthcare with easy-to-use dashboards and real-time delivery monitoring

IT-Ready

Integrates with user authentication, nurse call and EMR systems
